Invitation

Energy efficient construction and energy efficient heating and cooling systems in **M o r o c c o**

in the framework of the Energy Efficiency Export Initiative
on behalf of the Federal Ministry for Economics and Technology

July 24th, 2009 in Berlin

NUMOV is organizing the conference „Energy efficient construction and energy efficient heating and cooling systems in Morocco“ in the framework of the „Energy Efficiency Export Initiative“ on behalf of the Federal Ministry for Economics and Technology.

The demand for electricity in Morocco has grown by 8 % over the past five years. Construction of new power plants and improvements in piping are needed. In the next five years the Moroccan electricity company Office National d'Electricité (ONE) will invest 1 billion Euro annually in order to meet the steeply rising demand. The great need for sustainable and energy efficient technologies and know-how provides German production and consulting companies with good sales and cooperation opportunities, considering the leading role of Germany in these sectors. Since Morocco and the European Commission have signed the Joint Declaration on Priorities for Energy Cooperation in July 2007 Morocco has presented a bill on the promotion of renewable energies in the Council of Ministers as the first Arab country. In this context the percentage of renewable energies is to rise from currently 2 % to 10 % of total energy consumption. This is an ambitious goal, allowing German companies to benefit greatly.

The conference aims at improving the position of German companies. Medium-sized businesses are to be informed of the potential in the target country; participating businesspeople are to gain insights into their opportunities and fields of activity. The one-day event will comprise presentations by expert speakers from Germany and Morocco. By means of the contacts and cooperation exchange the companies are given the opportunity of establishing or improving their contacts with participants from Morocco.
